

## Wingstop

The Wingstop environment had me questioning the purpose of the color green, does it indicate trust in ingredients or make people hungry? The order board could also increase people's patience due to knowing how long they have to wait.

## Starbucks Lounge

I felt very comfortable studying in this environment due to its noise level, amount of people in the room, and the overall "vibe" of the lounge.

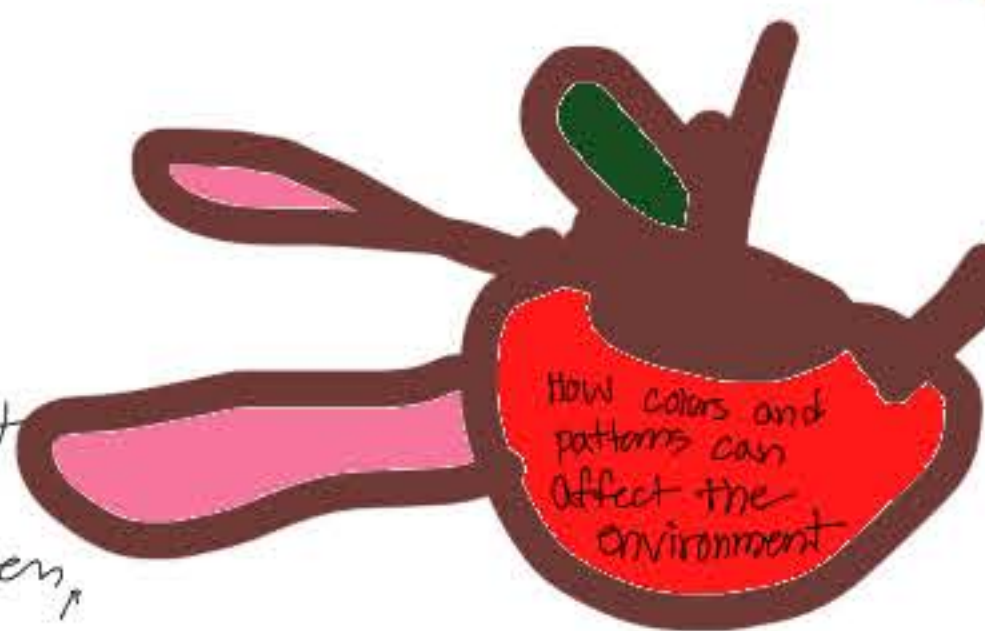

## 5th Floor Library

The less amount of people in a room made me more comfortable with looking around to observe others and objects. I also felt like I needed to stay quiet, even though that floor is for group work due to the emptiness.

How colors and patterns can affect the environment

Comfort in an environment

Starbucks Lounge

I felt very comfortable studying in this environment due to its noise level, amount of people in the room, and the overall "vibe" of the lounge.

Behavior based on environment

5th Floor Library

The less amount of people in a room made me more comfortable with looking around to observe others and objects. I also felt like I needed to stay quiet, even though that floor is for group work due to the emptiness.

## Phenomenons

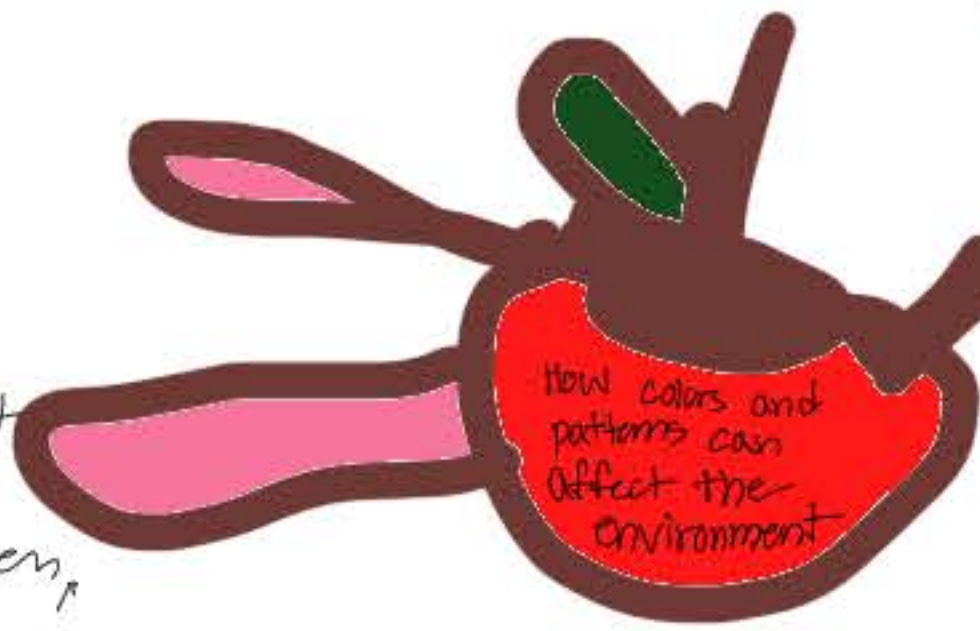

How environment affects feeling, behavior, and perception

## Questions

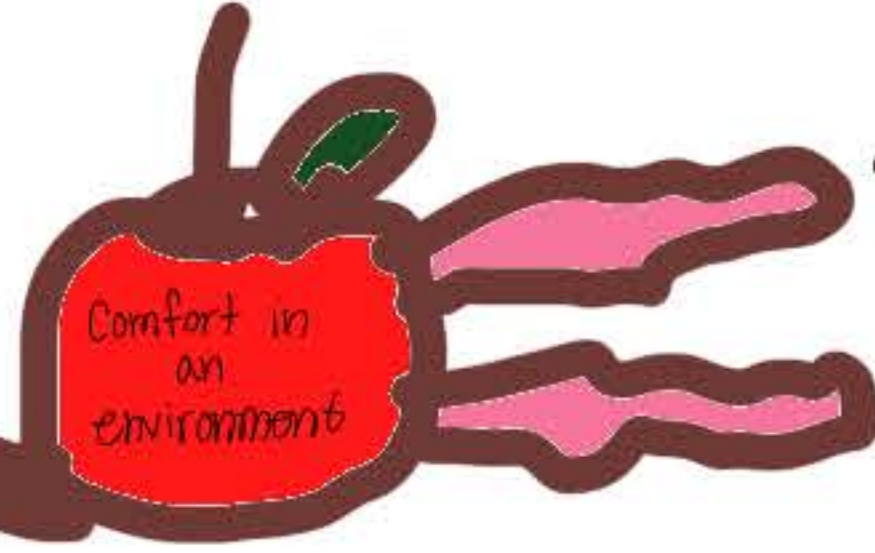

- What specific details in an environment can trigger anxiety or feeling uneasy? What triggers happiness and being comfortable?
- Why do people act different in different environments? What causes the change?
- How does people's perceptions of an environment differ from others? How does their perception affect their mood?
- Is there an increased life quality in people who are constantly in favorable environments vs. those who aren't?
